

Klinikum rechts der Isar

Technische Universität München

Postdoc Position Neuroimmunology (m/f/d)

The Department for Neurology at Klinikum rechts der Isar of the Technical University Munich is recruiting an **ambitious postdoc** to study basic principles in glial cell biology during autoimmune inflammatory and degenerative diseases of the central nervous system.

Candidates should hold a PhD degree in biomedical research, bioengineering or related areas and possess a strong interest to unravel immunological questions in inflammatory and degenerative diseases with the goal of developing novel therapeutic strategies.

The postdoc will work on a **fascinating project** focussing on glial co-inhibitory signaling in acute and chronic stages of autoimmune inflammation in the central nervous system, as well as its modulation by environmental and microbial factors. A young and dynamic research environment in a fully equipped and experienced wet and translational laboratory will allow candidates to establish and further their unique skill set with high relevance for basic and translational research.

Funding will be supplied according to TV-L and is provided by the German research foundation (DFG).

Please submit your application to veit.rothhammer@tum.de.
