

ITM Oncologics GmbH

ITM is a radiotheranostics company with a portfolio ranging from radioisotope manufacture to radionuclide imaging and therapy. ITM has a developing oncology pipeline with a broad range of clinical indications. The lead compound Solucin, is in Phase 3 development (COMPETE) for the treatment of neuroendocrine tumours. Other compounds are in development for the treatment of glioblastoma multiforme, metastatic bone cancer, prostate cancer and other oncology conditions.

ITM Oncologics is growing rapidly. This is an ideal opportunity for an ambitious drug safety physician to be a part of a this rapidly evolving company. This is a key leadership role within the medical group. The successful candidate will be expected to develop his/her team to support the commercialization of Solucin and the development of other pipeline products.

We would like to fill the following vacancy as soon as possible:

Head of Drug Safety & Pharmacovigilance (f/m/d)

Your Role:

- A senior member of the medical team, responsible for the development and building of the safety team at ITM
- Lead the strategy and safety for ITM assets from early clinical development to regulatory approval and commercialization
- Responsible for risk strategy, risk assessment and risk minimization of assigned products
- Proactively conduct signal management activities for products in clinical development
- Accountable for safety reports and strategic documents
- Overview of safety activities for Phase III study COMPETE, in particular SAEs and SUSARs, review of central clinical data, IDSMB meetings and study reports
- Actively contribute to publications related to clinical data and presentation of results at internal and external symposia
- Lead safety training to ITM Oncologics team
- Medical representative of the company, with a high profile both within the company and externally

What we are looking for:

- Medical doctor with clinical experience in a hospital healthcare setting
- Strong scientific knowledge in internal medicine, ideally with specialist experience in oncology and, or endocrinology
- Extensive industry experience in clinical safety and risk management on a corporate and global level. Whilst no specific length of experience is required, this would typically include at least 10 year's experience in drug safety, clinical development and commercialized products
- Experience in building and leading a successful team in a multidisciplinary matrix environment, including the management of CROs
- Thorough understanding of industry and drug safety legislation, including ICH-GCP and clinical safety guidelines
- Extensive experience in the preparation of regulatory dossiers and work with regulatory authorities

- A national / international involvement in drug safety and pharmacovigilance with as exemplified by active participation in national / international societies and training courses
- A proven track record in medical education and training
- Established presentation skills, preparing and giving medical scientific presentations to expert audiences
- Self-confident manner combined with strong communication skills – also fluent in business English
- Demonstrated leadership skills working in a multidisciplinary matrix setting

What we offer:

- A modern workplace and exciting opportunities in an evolving and fast growing company
- Challenging and varied projects in interdisciplinary, multicultural and highly professional teams
- A collegial corporate culture and short communication channels
- Flexible working hours with an attractive salary package and diverse corporate benefits

At ITM, we work together towards one common goal - the benefit of our patients. This is what drives us, every day. This is what we are passionate about. For this we create opportunities that are as unique as our team. We encourage diversity and inclusion – the input of our multi-cultural employees makes us who we are.

Only together we can contribute to significantly improving the outcome and quality of life of cancer patients worldwide and to giving better answers than “maybe”.

Does this sound like you? Are you interested in shaping the future of ITM and joining one of our highly committed teams in an innovative work environment?

Then send us your detailed CV including earliest start date and salary expectations. The position is intended for the ITM Oncologics GmbH, a company of the ITM group. Applications are accepted either in German or English language.
